```
1. 获取 KPI 属性
  • URL:/kpis/properties/id #id为KPI的id
  • 类型:GET
  • 返回值类型:JSON
  • 返回值:[{name:string,id:integer}]
2.同比分析(PIE图)
  • URL :/api/kpi entries/compare
  • 类型:POST
  参数:
    {kpi id: integer,
     entity group id: integer,
     average: integer,
     frequency: integer
     map group:{name:id}, # name和id为第一个API中的值
     base time:{start time: UTCTIME,
               end time:UTCTIME}

    返回值类型:JSON

    返回值:

    [{name:string,value:integer/float,last value:integer
    /float}]
3. 同比分析(折线)
  • URL :/api/kpi entries/compares
  • 类型:POST
  参数:
    {kpi id: integer,
     entity_group id: integer,
     average: integer,
     frequency: integer
     map group:{name:id}, # name和id为第一个API中的值
     base time:{start time: UTCTIME,
               end time:UTCTIME},
     point num:integer #点个数,可空,默认为10

    返回值类型:JSON

  返回值:
    [{key:string,value:integer/float}]
```
